

ARGOT NOVA, LLC

Argot Nova is a Veteran-owned, Woman-owned small business that connects an idea with the right data, builds the right model, and turns it into a tailor-made data product with a user-friendly front end. With diverse experiences from commercial, government, and non-profit realms, we find open-minded approaches to data and analysis challenges.

Argot Nova fixes existing data architectures and also builds new ones, utilizing the best constellation of cloud and local methodology, open-source technology, lean and matrixed teams to build accessible and democratic data solutions that don't depend on us staying for years to maintain.

OUR SERVICES

Research and Analysis

Analytics, AI, Machine Learning Models, and Language Analysis. We can utilize COTS and GOTS tools as well as build our own using open-source technology stacks.

Data Products

Development and hosting of data-centric applications, dashboards, visualizations, and custom APIs. Connection to COTS tools like Tableau and PowerBI or building custom applications with Python Flask and R Shiny.

Data Infrastructure

Initial design and construction of new data systems, using cloud or local approaches. Optimization of existing systems and pipelines. Specialized in AWS Cloud stack.
